

# UPGRADE YOUR ARCOMA SYSTEM

GOOD  
DESIGN

 ARCOMA

# LIVE CAMERA

The live camera gives the user a good overview of the patient during the entire examination. The camera view is shown both on the X-ray system's display and in the control room, which simplifies and makes work more efficient.

## Increased efficiency

Less running between patient and maneuver room.

## Increased patient safety

The live camera allows you to monitor the patient at all times.

## Avoid retakes

Avoid retakes by detecting if the patient has changed position.

# ADVANCED REMOTE CONTROL

The advanced remote control allows the user to easily adjust the position of the X-ray system in an ergonomic way, without working with the arms above shoulders. The remote control's built-in intelligence adapts the movements to the selected examination which ensures fast positioning.

## Shorten examination time

Adjustments can be performed faster and save time during examinations.

## Improved ergonomics

Allows to adjust the tube position from an ergonomic position.

## Adjustments made easily

Easy to adjust the position of the X-ray system from anywhere in the room.
